## PROFESSIONAL SUMMARY

Adaptable SRE & DevOps Analyst with strong foundations in Site Reliability Engineering, hybrid cloud infrastructure (Azure preferred, AWS), and CI/CD automation. Hands-on in supporting application availability, Service Level Indicators (SLIs), uptime optimization, and incident resolution across Dev, Test, and Prod environments. Skilled in pipeline execution via GitHub Actions, Azure DevOps, and Jenkins, alongside Docker containerization, Kubernetes concepts (AKS/EKS), Azure Monitor/CloudWatch alert handling, IAM/RBAC access management, and automation scripting in Python and Bash. Collaborative Agile contributor.

## TECHNICAL SKILLS

**SRE & Reliability:** Service Level Indicators (SLIs), Application Availability, Incident Troubleshooting, Root Cause Analysis (RCA), Uptime  
**Cloud Platforms & Infra:** Microsoft Azure (VMs, Blob Storage, Virtual Networks), AWS (EC2, S3, VPC), Hybrid Cloud Engineering, IAM / RBAC  
**CI/CD & Deployments:** GitHub Actions, Azure DevOps, Jenkins, Build & Release Management, Multi-Environment Deployments (Dev, Test, Prod)  
**Containers & Orchestration:** Docker Containers, Kubernetes Concepts, Azure Kubernetes Service (AKS Basics), Amazon EKS Exposure  
**Monitoring & Scripting:** Azure Monitor, AWS CloudWatch, Log Analysis, Metric Alerts, Python, Bash, PowerShell Basics, Git / GitHub  
**Governance & SDLC:** Software Development Lifecycle (SDLC), Agile / Scrum Ceremonies, Process Documentation, Resource Optimization

## TECHNICAL PROJECTS & SRE ENGINEERING

**Hybrid Cloud SRE Deployment & Monitoring Platform** | *Azure, AWS, GitHub Actions, Docker, Azure Monitor*

- Assisted in deploying multi-tier applications across Dev, Test, and Prod using GitHub Actions and Azure DevOps pipelines.
- Configured Docker container workloads and integrated basic Kubernetes (AKS) pod deployment configurations.
- Implemented monitoring dashboards with Azure Monitor and CloudWatch, establishing proactive metric alerts and log filters.
- Tracked Service Level Indicators (SLIs) and assisted in incident triage to maintain high system uptime and availability.

**Cloud Resource Automation & Security Governance Harness** | *Python, Bash, Azure IAM, RBAC, CloudWatch, Git*

- Wrote automated Python and Bash scripts to monitor cloud resource utilization and identify compute/storage bottlenecks.
- Supported cloud security governance by implementing IAM access policies, RBAC roles, and routine compliance checks.
- Documented standard operational runbooks and troubleshooting guides to support engineering knowledge-sharing.

**IntensHub - Service Operations & Reliability Platform** | *Python, Docker, GitHub Actions, Linux, SQL*

- Collaborated across Dev and QA teams to troubleshoot pipeline issues and support continuous, zero-downtime releases.

## PROFESSIONAL INTERNSHIPS & EXPERIENCE

**SRE & DevOps Engineer Intern - Tamizhan Skills** | *May 2024 - Jul 2024*

Supported CI/CD pipeline execution and basic enhancements using GitHub Actions, ensuring consistent application releases. Assisted in monitoring application availability and diagnosing error logs across Dev, Test, and Staging environments. Participated actively in daily stand-ups, sprint reviews, and cross-functional triage sessions with Dev, QA, and Infra teams.

**Auditor Intern - Compliance Unit** | *Jan 2023 - Mar 2023*

Audited operational process workflows, access control logs, and compliance records with meticulous analytical precision.

## EDUCATION & CERTIFICATIONS

### Bachelor of Computer Applications (BCA)

Srinivas University | Graduating: 2026

Focus: Cloud Computing, OS, Networks, SRE Practices

### Certifications & Credentials

AWS Certified Developer - Associate (Cloud Services)

Introduction to Full Stack & Web Engineering - SkillUp

GenAI Powered Data Analytics Job Simulation - Forage

Artificial Intelligence Fundamentals Systems - IBM SkillsBuild

## KEY ACTIVITIES & TECHNICAL ACHIEVEMENTS

Supported CI/CD execution and multi-environment deployments using GitHub Actions, Azure DevOps, and Docker. Monitored application availability, log analysis, and alert handling using Azure Monitor and AWS CloudWatch. Exercised cloud security practices (IAM/RBAC), basic SLI tracking, and Bash/Python automation scripting.
